Product of Debts Subtracted N Times from Zero		$\times N$ Multiplier	Product of Assets Subtracted N Times from Zero															

NOTES: Debts and assets are the Multiplicands to be multiplied by either a positive or negative Multiplier

A positive multiplier (+N) simply means the Product equals the Multiplicand (assets or debts) Added N times in succession to Zero

A negative multiplier (-N) simply means the Product equals the Multiplicand (assets or debts) Subtracted N times in succession from Zero
